

Component Performance

Quality Assurance Testing

TQC has specialised in the automated testing of components for many years. This knowledge is combined with TQC's experience in vehicle production line equipment and process automation. The result is a service to industry which can offer complete quality assurance testing using the most modern technology. TQC has an enviable reputation for providing both quality equipment and superb backup.

Every aspect of electrical, mechanical and software design, together with project development and manufacture is conducted on-site, enabling us to take full responsibility for your projects. Listing of parts, wiring diagrams and other information means that TQC can offer you a first class after sales service.

TQC
Automation & Test Solutions

TQC can provide equipment to test combinations of any of the following:

- Speed
- Torque
- Voltage, Current
- Resistance
- Power
- Pressure
- Flow
- Air/Vacuum decay leak testing
- Gas trace leak testing
- Flash testing
- Environment testing
- Noise vibration
- Distance & rotation
- Inductance & Capacitance
- Frequency

TQC can test:

- Motors and mechanisms
- Fuel, water and oil pumps
- Distributors & ignition components and systems
- Shock absorbers
- Sensors and transducers
- Clutch units
- Lighting and switches
- Valves
